4	UT-ASF	East Fork (Phinney Lake)	57% Confine 43% Full Supp	13 mi. N of Hanna, UT	68,342	+1,226	64%	10/30/20	Type 2 IMT GB Team 7 Jeff Knudson	0	2	1	0	1	232	1-T1/T2IA crew 1-DIVS 1-TFLD	Moderate threat to critical water infrastructure in Yellowstone drainage & values at risk in Brown Duck drainage.
5	ID-BOF	Buck	Full Suppression	30 mi. NE of Cascade, ID	19,474	+8	33%	10/31/20	Type 3 IMT NV Team 3 A. Bertelson	0	3	1	2	0	149	IR flight	Johnson Creek main corridor to isolated communities, Bull trout habitat, private & forest infrastructure
6	UT-NWS	William	51% Confine 49% Full Supp	2 mi S of Santaquin, UT	5,832	0	98%	9/28/20	Type 3 IMT Mike Erickson	1	0	0	0	1	199	1-T1 crew 2 HEQB Maintain current resources	Minimal threat to private properties, structures, energy infrastructures and I-15 and 132 corridor, watersheds and culinary water systems in fire area.

Great Basin Priority Summary - Based on Most Recent 209's
9/25/2020

[illegible]

Evening Brief

Date: Friday September 25th, 2020

Weather Summary

*** Gusty Wind/Low Humidity Sat/Sun across Central and Southeastern Utah with Gusty Winds/Higher RH Idaho ***

A cold front will continue to push south through the area on Saturday. Southern Utah and the Arizona Strip may see isolated critical winds/relative humidity on Saturday afternoon. Further north, temperatures will drop 10 to 15 degrees between Friday and Saturday. Overnight recovery will improve significantly Saturday night into Sunday.

Central Idaho and western Wyoming will see rain showers on Saturday. Up to a half of an inch of precipitation is possible across the higher terrain, with around a tenth of an inch of rain expected for the lower elevations of southern Idaho. However, this heavier precipitation may be spottier. All areas will experience cooler temperatures and higher RH.

Post frontal gusty north winds are expected across Utah on Sunday with gusts to 35-45 mph. RH will increase, but still drop to 12-20% in most areas.

Strong high pressure will build into the Great Basin early next week bringing an extended warming and drying trend.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 4	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 4 fires for 1 acres. 2,242 acres Large Fire Growth

Fuels/Fire Potential

*** Fuel and Fire Behavior Advisory Remains in Effect for Parts of Idaho, Eastern and southern Nevada into Utah ***

Recent moisture and cool temperatures across northern areas will raise fuel moisture temporarily. ERC's, which just a week ago were at record dry levels across Idaho, Wyoming and eastern Utah, have rapidly fallen back to near late September normals.

Otherwise, fuels will remain critical over most of the southern half of the Great Basin under drier conditions.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

In the long range, much above normal temperatures and very dry conditions by the end of the weekend into next week will bring about more rapid drying of fuels in most areas across the Great Basin. Fuels in the Western half of the Great Basin could once again reach near record level dryness.

Resources:

Aviation within the Great Basin

- 1 VLAT, 2 LATs, 0 CL-415
- 22 SEATs, 5 FB, 14 AA, 1 ASM, 0 LP
- 12 Type 1 Helicopters / 12 Comm.
- 9 Type 2 Helicopters / 9 Comm.
- 21 Type 3 Helicopters / 21 Comm.

Crews Committed within the Great Basin

- 8 IHCs / 0 Available
- 14 Type 2IA / 0 Available
